

A conceptual architectural drawing of a winding, ribbed path. The path is composed of many parallel, curved ribs that create a sense of movement and flow. It winds through a landscape, with various seating areas and human figures integrated into the design. On the left, a person is sitting on a low table. In the center, a person is sitting on a bench. On the right, a person is sitting in a wheelchair. The path ends on the right side, where it curves upwards and then downwards. The overall style is minimalist and conceptual, with a focus on the form and function of the path.

Design Brief & Final Concept

- **Queen's Lawn**, the primary green space on campus, faces limited year-round usability due to **seasonal weather conditions**. The space **lacks sufficient seating, shelter, and social infrastructure**, reducing its adaptability and comfort throughout the year. Our project focuses on **creating a comfortable, attractive, playful, and multifunctional facility** for **users** to study, play, and relax in Queen's Lawn and further increase **social interactions**.

User research

Primary User – Students

Most Imperial students are willing to use the grassland, so it's vital to provide space and facilities for study and relaxation.

Secondary User – Staff

Provide a comfortable space for staff to unwind during breaks from office hours.

Weather Conditions

Design should enable year-round usage regardless of climate and weather.

Social interaction

The design should encourage social interaction in a shared space. eg. playful facilities

Adaptability

Maximize functionality and adaptability for different user needs. eg. study, relax

Comfortable seating

Seating should be comfortable and weather-resistant for individuals.

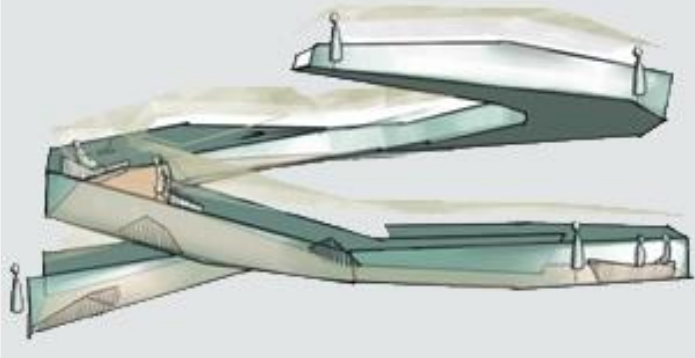

Aesthetics & Culture

The structure should be visually appealing relating to school Culture.

Final Concepts ready for Prototype

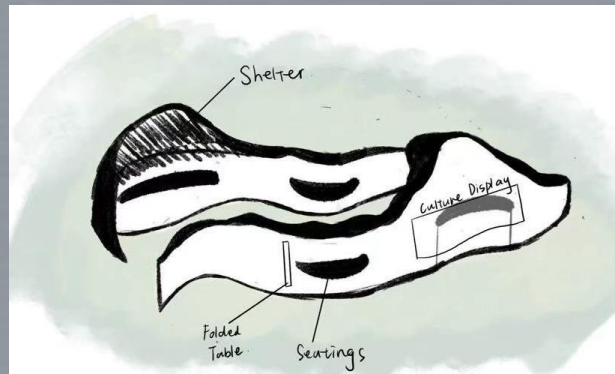

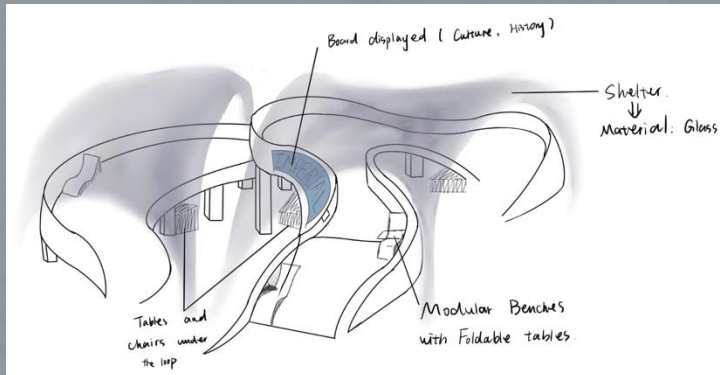

Modular Seating Unit

Modular seating unit:

- Need to satisfy the needs for both individual and multiple users
- Ensure comfort
- For multipurpose

Two designs- 'The Loop' & 'The Path'

The Loop & The Path:

- The staircase design is very efficient
- A big structure is less feasible
- The construction of glass house is too costly
- A single bench is not sufficient for group activities
- The vibe of walking in a spiral structure is good
- Combine all the features above

Prototype iterations & User feedback

Chair unit: User experience and feedback:

- Structure
- Comfort
- Extra design & function

Overall unit:

User experience and feedback:

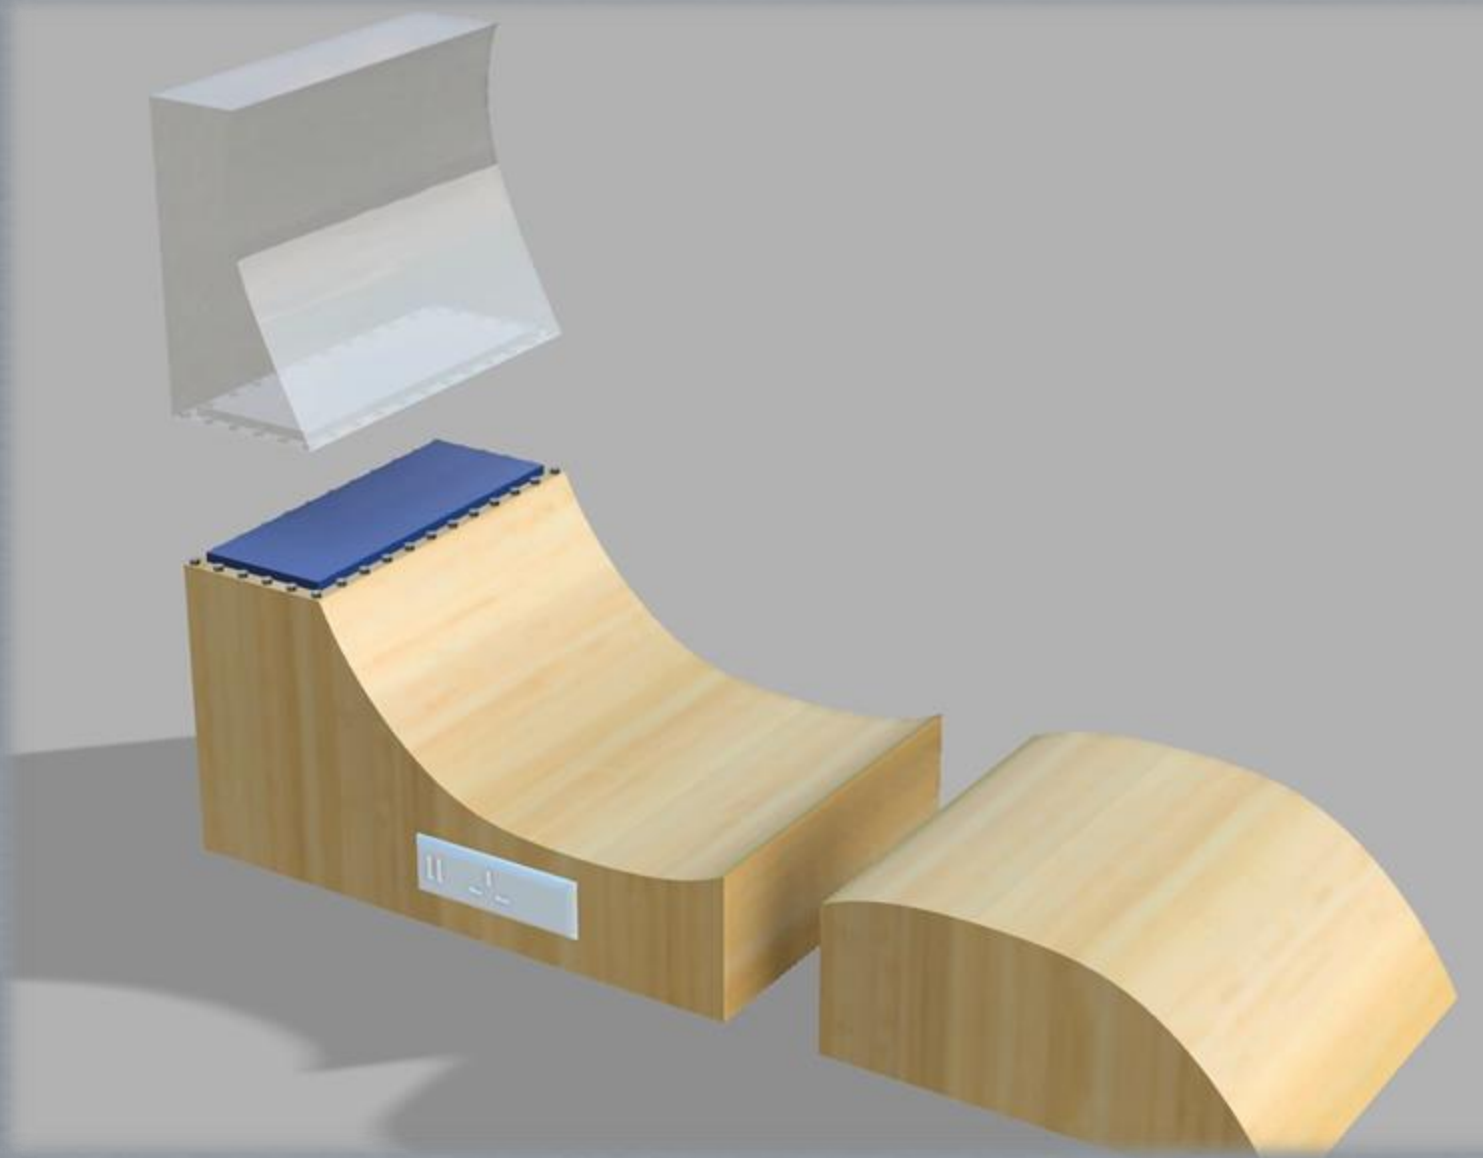

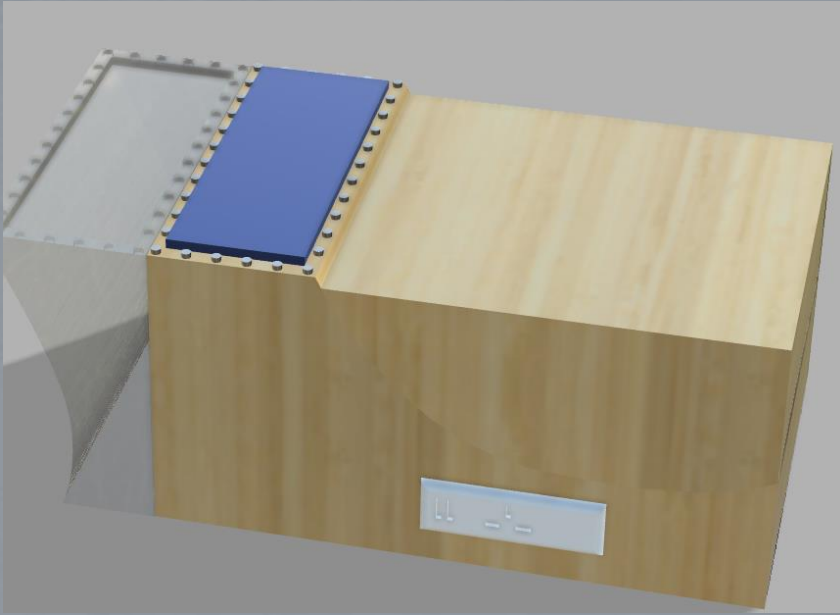

- Structure
- Facilities
- Playfulness
- Extra design & function
